

# Code injections

The theme facilitates a growing list of customizations via the **code injections** option of Ghost. Explore all available customization options in this section.

- [Google fonts](#)
- [Rounded edges](#)

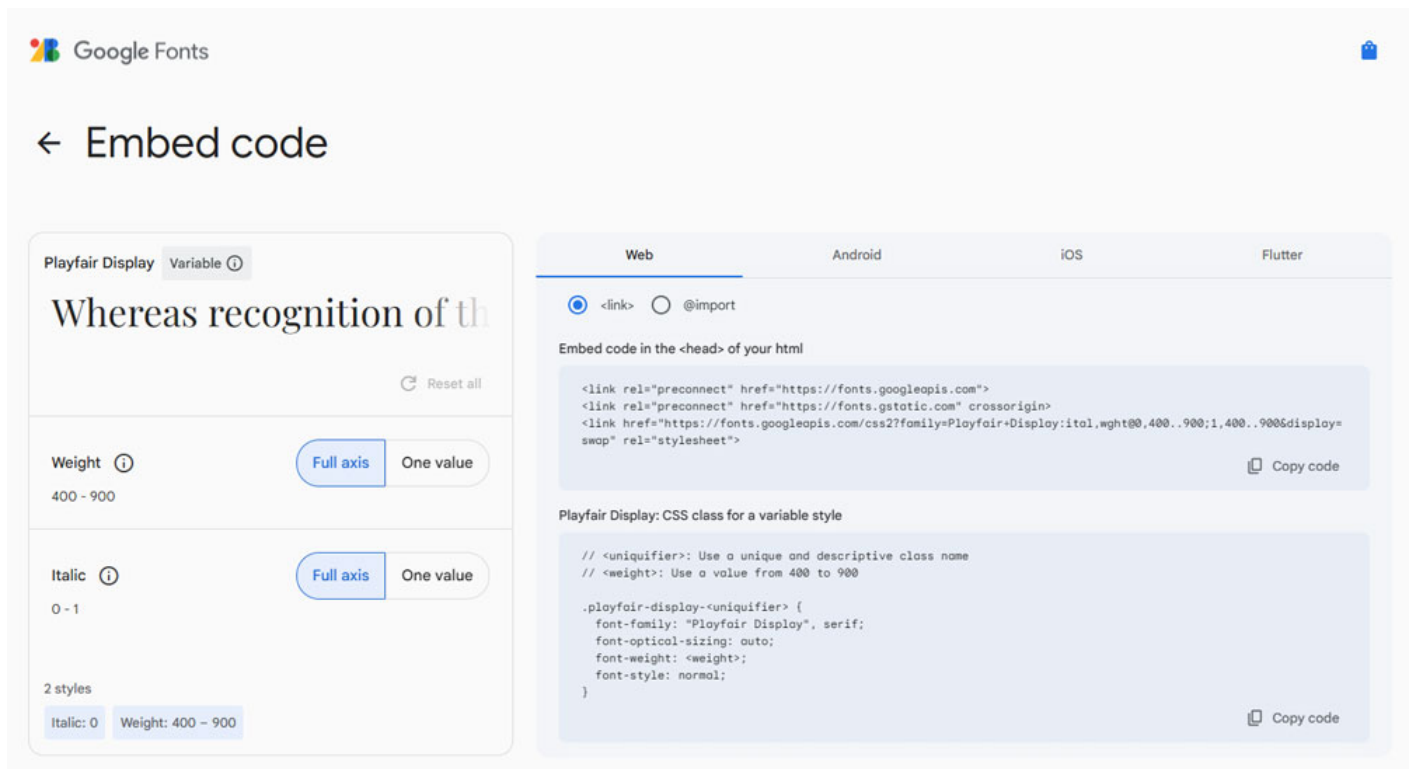

# Google fonts

Now you can use native [Custom fonts option](#) of Ghost.

The theme offers the flexibility to incorporate Google Fonts or other font libraries. You can choose to set two different fonts for titles and body text or use the same font for both throughout your site.

## Obtain the embed code

1. Visit [fonts.google.com](https://fonts.google.com) & and choose your preferred font.
2. Click the "**Get embed code**" button to obtain the embed code for the selected font.

The screenshot shows the Google Fonts interface for the 'Playfair Display' font family, specifically the 'Variable' version. The 'Embed code' tab is selected, showing options for 'Web', 'Android', 'iOS', and 'Flutter'. The 'Web' tab is active, displaying the 'link' radio button selected over '@import'. Below this, there are two code blocks. The first block, titled 'Embed code in the <head> of your html', contains HTML code for linking to the font. The second block, titled 'Playfair Display: CSS class for a variable style', contains CSS code for styling the font. Both code blocks have a 'Copy code' button. On the left side of the interface, there are settings for 'Weight' (400 - 900) and 'Italic' (0 - 1), both set to 'Full axis'.

Embed code in the <head> of your html

```
<link rel="preconnect" href="https://fonts.googleapis.com">
<link rel="preconnect" href="https://fonts.gstatic.com" crossorigin>
<link href="https://fonts.googleapis.com/css2?family=Playfair+Display:ital,wght@0,400..900;1,400..900&display=swap" rel="stylesheet">
```

Copy code

Playfair Display: CSS class for a variable style

```
// <uniquifier>: Use a unique and descriptive class name
// <weight>: Use a value from 400 to 900

.playfair-display-<uniquifier> {
  font-family: "Playfair Display", serif;
  font-optical-sizing: auto;
  font-weight: <weight>;
  font-style: normal;
}
```

Copy code

## Configure the font with Ghost

### To configure the font:

1. Navigate to '**Code injections**' settings in the Ghost Admin.
2. Locate the "**Site header**" tab on the left-hand side of the interface.

3. Copy and paste the "**Embed code in the <head> of your html**" code from Google fonts.
4. Copy and paste the following code underneath the embed code.
5. Change the "**Font Name Here**" value accordingly with "**CSS class for a variable style**" from Google fonts.

```
<style>
:root{
  --body-font:"Font Name Here", sans-serif;
}
</style>
```

## Optional: Set a different Title font

Alternatively, you can specify a distinct font for titles and another for remaining text.

1. Select your preferred font on Google fonts.
2. Copy and paste the new "**Embed code in the <head> of your html**" code from Google fonts in to the "**Site header**" section in Ghost.

**Important:** When selecting multiple fonts, Google Fonts regenerates the embed code for the header. Ensure that you copy and paste the latest version of the embed code.

3. Add the `--title-font` variable along with your new title font name as follows.

```
<style>
:root{
  --body-font:"Font Name Here", sans-serif;
  --title-font: "Font Name Here", serif;
}
```

</style>

6 <style>
7   :root{
8     --body-font: "Open Sans", sans-serif;
9     --title-font: "Playfair Display", serif;
10  }
11 </style>
```

Code here will be injected into the {{ghost\_head}} tag on every page of the site

# Rounded edges

The theme is designed with rounded edges for most elements by default. However, you can disable or adjust the roundness of these elements using Ghost code injections option.

## To disable/modify rounded edges:

1. Navigate to '**Code injections**' settings in the Ghost Admin.
2. Locate the "**Site header**" tab on the left-hand side of the interface.
3. Paste the following code at the very beginning of the "**Site Header**" section.
4. Adjust the value as needed.

```
<style>
:root{
  --global-border-radius: 1.5rem;
}
</style>
```

**Note:** To disable rounded edges, use the value 0. e.g. : `--global-border-radius: 0;`
