

# Contact page

If you want your readers to contact you directly, you can add a contact page to your website. This theme includes built-in [Formsfree.io integration](#) for easy setup.

## Add the contact page

1. Create a new page, add a page title, add an excerpt, and open the '**Page settings**' panel using the icon in the top right of the screen.
2. At the bottom of the panel you'll see a dropdown menu titled '**Template**'.
3. Use the dropdown menu to select the '**Contact**' template, close the panel.
4. Finally, click '**Publish**'.

The screenshot displays a web editor interface. On the left, the main content area shows a page titled 'Let's Talk' with a subtext 'Begin writing your page...'. Above the title is a button '+ Add feature image' with a camera icon. At the top of the editor, there are navigation links: '< Pages', 'Published ↗', a green 'Update' button, and an 'Unpublish' button. On the right, the 'Page settings' panel is open, featuring a close button (X) in the top right corner. The panel includes the following sections: 'Page URL' with a 'View page ↗' link, a text input field containing 'contact-us', and a preview URL 'localhost:2368/contact-us/'; 'Publish date' with two input fields showing '2024-03-16' and '09:13 UTC'; 'Tags' with a dropdown menu; 'Page access' with a dropdown menu set to 'Public'; and 'Excerpt' with a text area containing the text 'Have any questions? Reach out to us from our contact form and we will get back to you shortly.'

## Easy: Standard Contact Form

To simplify setup, we've pre-built a contact form into the contact page, featuring fields for Name, Email Address, and Message. You can enable this quickly and easily, even without any coding

knowledge.

## Create a form on Formspree.io

1. Go to [formspree.io](https://formspree.io) and sign up for an account.
2. Once signed in, create a new form and obtain the endpoint URL for the form.

### Contact Form

[Integration](#) [Submissions](#) [Settings](#) [Plugins](#) [Rules](#)

Your form's endpoint is:

`https://formspree.io/f/xeqylqgk`

Copy

## Add your Formspree endpoint

1. Navigate to '**Design & branding**' settings in the Ghost Admin.
2. Locate the "**Site wide**" tab on the right-hand side of the interface.
3. Navigate to the field labeled "**Contact form endpoint**" and toggle on or off the setting.
4. Paste your Formspree endpoint. e.g: `https://formspree.io/f/xeqylqgk`
5. To apply the modifications you've made, click the "**Save**" button.

## Advanced: Custom Contact Form

If you prefer to use a custom contact form instead of the one included with the theme, you can do so without editing the theme files.

**Important:** This step is not required if you have set up the standard contact form.

## Enable the custom contact form

1. Navigate to the contact page you have created
2. Open the '**Page settings**' panel using the icon in the top right of the screen.
3. In the tags field, add the internal tag `#custom_contact_form`

✍️

## Add the custom contact form

1. Go to your Formspree account and copy the form content from the "**HTML**" section.

# Contact Form

[Integration](#) [Submissions](#) [Settings](#) [Plugins](#) [Rules](#)

## Integrate with your usecase

Check out the code snippets below for more examples:

HTML

AJAX

React

HTML with file uploads

Formbutton

```
<!-- modify this form HTML and place wherever you want your form -->
<form
  action="https://formspree.io/f/xeqylqgr"
  method="POST"
>
  <label>
    Your email:
    <input type="email" name="email">
  </label>
  <label>
    Your message:
    <textarea name="message"></textarea>
  </label>
  <!-- your other form fields go here -->
  <button type="submit">Send</button>
</form>
```

2. Navigate back to the Ghost dashboard and open the Contact page.
3. Create an HTML card and paste the copied HTML code from Formspree.
4. Customize the form with your custom fields.
5. To apply the modifications you've made, click the **"Update"** button.

## Example Custom Form Code

```
<form action="https://formsfree.io/f/xeqylqgr" method="POST">
  <label>
    Your email:
    <input type="email" name="email">
  </label>
  <label>
    Department:
    <select name="department">
      <option disabled>Select a department</option>
      <option value="Sales">Sales</option>
      <option value="Billing">Billing</option>
      <option value="Customer Support">Customer Support</option>
    </select>
  </label>
  <label>
    Your message:
    <textarea name="message"></textarea>
  </label>
  <button type="submit">Send</button>
</form>
```

As long as you adhere to the format described above, the form submission will be processed through an AJAX request by default, preventing redirection to formsfree.io after submission.
